Susan Harrington, Chair Riverside County Health Department:

I made some additions to your web page that may raise some questions for you from the press. You can see your page here: <http://seeitreal.com/Riverside.aspx>

You could show some good faith and release the information I requested opposed to the adversarial position you have taken by refusing my lawful request. It is a California law, you are well aware of, that mandates you provide that information. Relying on the fact that Riverside courts are over burdened is a criminally malicious act, unbecoming your position (even if it is unlikely to be prosecuted or pursued civilly). More importantly, why aren't we working together for the good of the public trust?

Most importantly, what negative malicious act could I be pursuing in trying to prevent the eventual contamination of a Riverside County aquifer? If you see any other purpose to my website that you or the Riverside County Health Department cannot support, please advise. Otherwise, I expect to receive the information I requested or the basis for your denial of that information in writing forthwith.

Robert Armstrong
